## Face recognition

What is face recognition?

deeplearning.ai

#### Face recognition

[Courtesy of Baidu]

#### Face verification vs. face recognition

- -> Verification
  - Input image, name/ID
  - Output whether the input image is that of the claimed person

 $\rightarrow$  Recognition

- Has a database of K persons
- Get an input image

<u>K=100</u> <

|:|<|

• Output ID if the image is any of the K persons (or "not recognized")

9./0

## Face recognition

## **One-shot learning**

deeplearning.ai

#### One-shot learning

-> CNN -> O Softmax ~ (6)

Learning a "similarity" function  $\rightarrow$  d(img1,img2) = degree of difference between images If d(img1,img2)  $\leq \tau$  "some"  $\geq \tau$  "different"  $\left\{ \begin{array}{c} \text{Vertication.} \\ \text{Vertication.} \end{array} \right\}$

## Face recognition

## Siamese network

deeplearning.ai

#### Siamese network

[Taigman et. al., 2014. DeepFace closing the gap to human level performance]

128

#### Goal of learning

#### Learn parameters so that:

If  $x^{(i)}, x^{(j)}$  are the same person,  $\|f(x^{(i)}) - f(x^{(j)})\|^2$  is small. If  $x^{(i)}, x^{(j)}$  are different persons,  $\|f(x^{(i)}) - f(x^{(j)})\|^2$  is large.

## Face recognition

## Triplet loss

deeplearning.ai

### Learning Objective

[Schroff et al., 2015, FaceNet: A unified embedding for face recognition and clustering]

## Choosing the triplets A, P, N

During training, if A,P,N are chosen randomly,  $d(A,P) + \alpha \leq d(A,N) \text{ is easily satisfied.}$  $\|f(A) - f(P)\|^{2} + \alpha \leq \|f(A) - f(N)\|^{2}$ 

 $d(A,P) + d \leq d(A,N)$  $d(A,P) \approx d(A,N)$ 

Choose triplets that're "hard" to train on.

## Neural Style Transfer

## Cost function

deeplearning.ai

#### Neural style transfer cost function

 $J(G) = d J_{\text{content}}(C, G)$ 

+ B J Style (S,G)

[Gatys et al., 2015. A neural algorithm of artistic style. Images on slide generated by Justin Johnson] Andrew Ng

#### Find the generated image G

- 1. Initiate G randomly
  - $\underline{\text{G: } 100 \times 100 \times 3}$
- 2. Use gradient descent to minimize J(G)

RUB

$$G_{i} = G - \frac{d}{2G} J(G)$$

[Gatys et al., 2015. A neural algorithm of artistic style]

Neural Style Transfer

Content cost function

deeplearning.ai

Content cost function

$$\underbrace{J(G)}_{\uparrow} = \alpha \underbrace{J_{content}(C,G)}_{\uparrow} + \beta J_{style}(S,G)$$

- Say you use hidden layer *l* to compute content cost.
- Use pre-trained ConvNet. (E.g., VGG network)
- Let  $\underline{a^{[l](C)}}$  and  $\underline{a^{[l](G)}}$  be the activation of layer l on the images
- If  $a^{[l](C)}$  and  $a^{[l](G)}$  are similar, both images have similar content  $\int_{context} (C,C) = \frac{1}{2} \left\| a^{(L)}_{a} - a^{(L)}_{a} \right\|^{2}$

[Gatys et al., 2015. A neural algorithm of artistic style]

deeplearning.ai

## Neural Style Transfer

# Style cost function

#### Meaning of the "style" of an image

Say you are using layer *l*'s activation to measure "style." Define style as correlation between activations across channels.

How correlated are the activations across different channels?

[Gatys et al., 2015. A neural algorithm of artistic style]

#### Intuition about style of an image

#### Generated Image

[Gatys et al., 2015. A neural algorithm of artistic style]

[Gatys et al., 2015. A neural algorithm of artistic style]

Style cost function

 $\left\| \left( \int_{C}^{TRJ(S)} - \left( \int_{C}^{TRJ(G)} \right) \right\|_{F}^{2} \right\|_{F}$ 

$$J_{style}^{[l]}(S,G) = \frac{1}{\left(2n_{H}^{[l]}n_{W}^{[l]}n_{C}^{[l]}\right)^{2}} \sum_{k} \sum_{k'} \left(G_{kk'}^{[l](S)} - G_{kk'}^{[l](G)}\right)$$

 $\overline{J}(G) = \mathcal{A} J_{\text{control}}((, G) + \beta J_{\text{style}}(S, G)$ 

[Gatys et al., 2015. A neural algorithm of artistic style]
