

Lecture 6: ML Project Strategy

Menti Code: 12 07 68

"Alexa" - trigger word.

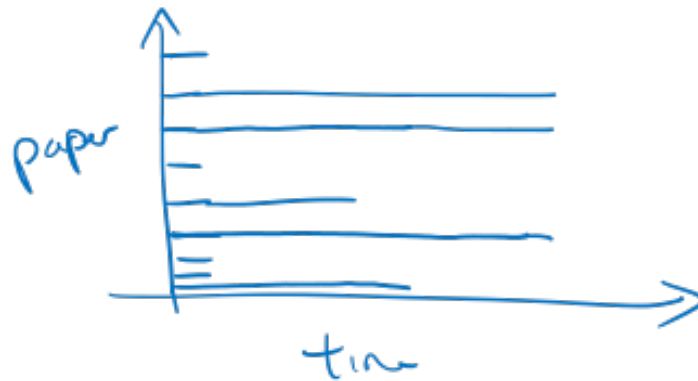

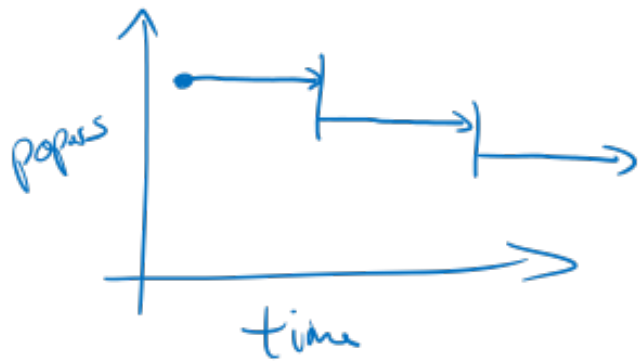

"Lara turn on"
"Lara turn off"

Robot turn on

"RTO"

Read online literature.

- Blog posts, research papers, code (github).

5-20 papers

Some papers don't make sense, or are wrong.

Talk to experts.

- Email authors.

Collect training + dev + test. sets

What would if you put ~~set~~ in the dev set?
How many examples?

100 clips → 3000 excerpts

25 det
no test

det accy: 99.5%

2em detections.

1000 : 1
200 : 1 ←
10 : 1 }
1 : 1 } 10 : 1
5 : 1
2 : 1

98% away on train.

50% on dev.

1) Collect background audio.

2) Collect n sec clips of RTO, and of random words.
"cardinal"

3) Synthesize n sec clips.

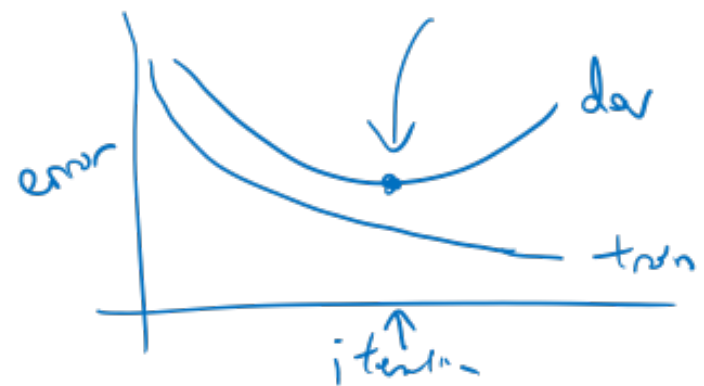

Do the quick thing first.

⇒ 1) Run crawl Stanford.	— <u>100</u>	<u>5h</u> ←
2) Download clips online.	50	5h
3) Tickers	1000	<u>48h</u>

Overfitting still

Model takes ~8h to train.

early stopping

→ 12 months.

→ 1 month.
